

PENTARCH FORESTRY™ FACTS

Key aspects of our business:

- ✓ Just 6 in every 10,000 trees are harvested each year in Australia.
- ✓ ALL trees harvested in native forests are regrown by law.
- ✓ Native forest harvesting is controlled by harvest plans which exclude areas where wildlife might be present, or which may have environmental significance.
- ✓ Koala populations are NOT negatively impacted by native timber harvesting. In fact, koalas are regularly found in post-harvest regrowth forests which contain fresh, young fodder.
- ✓ Forestry is carbon positive. We use the wood to make carbon-storing wood and wood fibre products, and regrowing forests absorb more carbon. Timber is a superior alternative to plastic, metal and concrete for these reasons.
- ✓ Australia has the most strictly controlled timber industry of any country, so we should be producing more timber products here rather than importing them from overseas.
- ✓ The NSW native timber sector contributes \$1.1b to the State's bottom line and supports 8900 jobs.
